EDUCATION

Viva Institute of Technology, Mumbai — **Nov 2022 - May 2026**
B.E. CSE – Artificial Intelligence & Machine Learning — **CGPI: 8.39/10**

EXPERIENCE

MCM BPO — AI Engineer | On-site | July 2026 – September 2026
• Developed Python backend services and integrated SMPP messaging protocols for multi-message delivery, implementing REST APIs, messaging workflows, service integration, and backend application logic.
• Integrated PostgreSQL databases with backend services and contributed to React frontend development, including API integration, database operations, debugging, feature implementation, and Git/GitHub-based development.

Brainwonders — AI Intern | On-site | December 2025 – January 2026
• Developed AI/ML and Computer Vision solutions for curriculum gap analysis and image-based fingerprint scanning using semantic analysis, image preprocessing, and feature extraction.
• Implemented Python-based AI workflows involving OCR, image enhancement, Computer Vision algorithms, and model integration for end-to-end applications.

Makhija Quantum AI — AI Intern | Hybrid | November 2025
• Developed components for an AI-powered image editing solution enabling automated background and object removal using image segmentation and inpainting.
• Applied Python, Deep Learning, Computer Vision, U²-Net, and MiGAN-512 for image preprocessing, model inference, segmentation, and AI application integration.

PROJECTS

MultiModal RAG Research Assistant | Python, FastAPI, Streamlit, LangChain, LangGraph, ChromaDB, Gemini, Sentence Transformers, EasyOCR, OpenCV, Docker | GitHub
• Developed a multimodal RAG system for semantic search and question answering across PDFs, scanned documents, and images.
• Engineered an end-to-end pipeline for OCR, document processing, embeddings, semantic retrieval, and citation-aware responses using LangChain, ChromaDB, and Gemini.

DeepFake Detection using XceptionNet | Python, TensorFlow, Keras, Flask | GitHub
• Developed an XceptionNet-based DeepFake detection system trained on Celeb-DF v2 and DFDC datasets.
• Engineered face extraction, preprocessing, and frame-level inference, deploying a Flask-based application for image and video detection.

Pixerase.AI – AI Image Editing Platform | Python, Flask, OpenCV, U²-Net, MiGAN-512 | GitHub
• Developed an AI-powered image editing platform for automated background and intelligent object removal.
• Integrated U²-Net for foreground segmentation and MiGAN-512 for image inpainting and restoration.

TECHNICAL SKILLS

- **Programming Languages & Databases:** Python, SQL, PostgreSQL, JavaScript, HTML, CSS
- **AI/ML:** Supervised Learning, Unsupervised Learning, Regression, Classification, Transfer Learning, CNNs, RNNs, Feature Engineering, Model Evaluation
- **Computer Vision:** OpenCV, YOLOv8, Image Classification, Object Detection, Face Detection, Image Segmentation, Image Enhancement, Image Inpainting, OCR, Video Analysis
- **Generative AI & NLP:** LLMs, RAG, MCP, LangChain, LangGraph, Prompt Engineering, Semantic Search, Embeddings, ChromaDB, NLP
- **Frameworks & Libraries:** TensorFlow, PyTorch, Keras, Scikit-learn, Pandas, NumPy, FastAPI, Flask, Streamlit, React, Next.js
- **Tools, Deployment & Platforms:** Git, GitHub, Docker, Render, Vercel, Railway, VS Code, Jupyter Notebook, Google Colab, Claude Code, ChatGPT, Gemini, Trae, GitHub Copilot

CERTIFICATIONS

- Deep Learning — IIT Ropar, NPTEL (71%)
- Supervised Machine Learning: Regression and Classification — Coursera
- Unsupervised Learning, Recommenders & Reinforcement Learning — Coursera
- Object Oriented Programming using Python — Infosys
- Career Essentials in Generative AI — Microsoft & LinkedIn
